TITLE: Prod'n. of tri:chloro:silane - by reducing
tetra:chloro:silane in fluidised bed reactor
contg. silicon@ particles

INVENTOR: GRIESSHAMMER, R; KOEPPL, F ; SCHREIEDER, F

PRIORITY-DATA: 1995DE-1034922 (September 21, 1995).

ABSTRACTED-PUB-NO: DE 19534922C

BASIC-ABSTRACT:

Prod'n. of trichlorosilane comprises reducing tetrachlorosilane in a fluidised bed reactor contg. Si particles, in which a reaction gas contg. H2 and tetrachlorosilane is passed through the fluidised bed to react with the Si particles and produce a product gas contg. trichlorosilane. The

product gas
can be removed from the reactor. The novelty is that the Si
particles are
heated by microwaves to 300-1100 deg.C. A process for producing pure
Si is
also claimed.

USE - The process is used to clean appts. used in the mfr.of
polycrystalline Si
from unwanted Si deposits.

ADVANTAGE - Conversion rate is increased.
